

TECHNICAL RIDER

Slack Rope Structure

Preparation time:

Assembling: 15 minutes starting from the beginning,

1 minute if the two ropes going to the hooking points have been previously prepared.

Disassembling: 1 minute.

Technical requirements:

Two hooking points are needed in order to hook the structure reproduced below; these hooking points must be on the ground level, with a distance of about ten meters between them and a resistance of minimum 350 Kg each (examples: lamp-posts, columns, traffic lights, road signs, cement benches, trees, iron bars firmly planted in the ground, cement blocks, wall plugs...).

Minimum distance between the hooking points: 9 meters

Maximum distance between the hooking points: 20 meters
