

TECHNICAL RIDER

Slack Rope Structure

Preparation time:

Assembling: 15 minutes starting from the beginning,
1 minute if the two hooking points have been previously prepared.

Disassembling: 1 minute.

Technical requirements:

Two hooking points are needed in order to hook the structure reproduced below; these hooking points must be on the ground level, with a distance of about ten meters between them and a resistance of minimum 350 Kg each (examples: lamp-posts, columns, traffic lights, road signs, cement benches, trees, iron bars firmly planted in the ground, cement blocks, big plastic boxes filled with water or sand ,wall plugs etc...).

Minimum distance between the hooking points: 9 meters

Maximum distance between the hooking points: 20 meters
